

Plan your visit

Need to reschedule? It can take a few weeks

We will do our best to reschedule your visit quickly, but appointments can fill up for weeks. Rescheduling may also delay your baby's vaccinations, which need to be given at specific times.

Give yourself extra time to get here

If you arrive late, we may need to reschedule your visit. If you need help with transportation or timing, ask the front desk.

Please — call to cancel! 📞(312) 949-4200

If you can't make your appointment, please call us 24 hours ahead so we can offer your valuable spot to another parent.

Manage your care with [LiveWell](#)

Manage your appointments, check test results, and message your doctor on the LiveWell app or website.

Need help?

Rides to your visit

Illinois Medicaid covers free rides to medical visits. Call the number on your insurance card to set one up. Make sure to call and ask for your ride at least 3 business days before your visit.

Insurance coverage

Many new parents forget to add their baby to their insurance (especially Medicaid). Call your insurance company to make sure your baby is currently covered. The number is on the back of your insurance card.

Also confirm that Advocate clinics are covered by your insurance.

WELL-CHILD VISITS

Baby's growth in the first 12 months

Partnering for a healthy first year

Don't forget to bring:

Paperwork

- ☐ Insurance card
- ☐ Photo ID
- ☐ Any forms you need filled out
- ☐ A written list of any questions you have

Supplies

- ☐ Diapers and wipes
- ☐ Change of clothes for you and your baby – just in case!
- ☐ Snacks
- ☐ Bottle with formula or breastfeeding supplies
- ☐ Blanket

Dress your baby in easy-to-remove clothing, like zip-up pajamas or a baby robe, to make undressing faster and easier.

Your baby changes a lot in the first year!

Well-child visits help track how your baby is growing and changing. Some babies may need extra help along the way, and that's okay. Early visits make sure baby gets the right support at the right time. Ask your doctor about anything — no question is too small.

Baby's development		1		2		4		6		9		12	
Language		Reacts to loud sounds		Coos and makes sounds		Laughs out loud		Makes sounds ("ma," "da")		Tries to say 1–2 words			
Learning		Follows objects with eyes		Reaches for objects		Explores objects with hands		Looks for dropped objects		Puts objects into containers			
Movement		Holds head up briefly		Pushes up on arms		Rolls both ways		Sits without support		Pulls to stand, cruises along furniture			
Social		Smiles at familiar faces		Excitedly kicks legs		Interested in mirrors		Plays peek-a-boo		Uses gestures like waving			
Age range

MONTH 12

2 month visit

Your doctor will check to see if baby is growing as expected. They will also give the first round of shots and ask how you're feeling.

3 shots + 1 liquid by mouth

- ☐ DTaP, IPV, Hepatitis B
- ☐ PCV20 (pneumonia)
- ☐ Hib (baby meningitis)
-  Rotavirus

After shots, plan for:

- redness or swelling where the shot was given
- baby to be fussy or sleep more than usual
- mild fever (ask your doctor for Tylenol dosing)

4 month visit

Your doctor will check baby's hips and watch their movements. They will also do an eye exam and listen to your baby's heart.

3 shots + 1 liquid by mouth

- ☐ DTaP, IPV, Hepatitis B
- ☐ PCV20 (pneumonia)
- ☐ Hib (baby meningitis)
-  Rotavirus

Daycare alert!

Most daycares require your baby to be up to date on shots. Attending this visit keeps baby on track.

6 month visit

Your doctor will check baby for readiness for solid foods. They will also check how baby is responding and laughing.

2 shots + 1 liquid by mouth

- ☐ DTaP, IPV, Hepatitis B
- ☐ PCV20 (pneumonia)
-  Rotavirus

Your baby will now be protected during the most vulnerable first year of life.

Last chance!

The Rotavirus vaccine must be given before your baby is 8 months old.

9 month visit

Your doctor will do a screening test that spots early signs of delays in speech and movement.

Catching things early is important because it's easier to give your baby extra support to catch up.

Tests

Your doctor may test for lead exposure and anemia. These can cause harm to your baby's brain and development.

**These tests may occur during your baby's 9 or 12 month visit, depending on your clinic and insurance plan.*

12 month visit

Your doctor will talk about readiness to switch to cow's milk, transitioning to sippy cups, and brushing your baby's teeth.

Your baby will also start a different set of vaccines.

3 shots

- ☐ MMR
- ☐ Varicella (Chickenpox)
- ☐ Hepatitis A

After shots, baby may have a fever right away, or a rash a few days later — both are normal.
